

Covenant HealthCare Public Reporting of Outcomes 2015

One in every two men and one in every three woman have the likelihood of being diagnosed with cancer in their lifetime. With odds like that, it is probable, that every person reading this has been or knows someone who has been touched by cancer.

Covenant has been caring for the cancer needs of our community since the late 1800s. Today, our commitment to providing extraordinary care to our community is stronger than ever. Our goal is to bring world-class cancer care to our local community, so our patients can stay in the comfort of their homes with close proximity to their loved ones and support team.

We began this journey in 2013 with the help of donors of the Covenant HealthCare Foundation. A \$4 million investment was made to renovate the Mackinaw campus which includes; infusion and radiation therapy, nurse navigators, nutrition and social work services, support groups, spiritual care, and an education resource center- where patients and physicians benefit from having one another close by, for even better connectivity and collaborative care.

In June 2015, we announced Covenant HealthCare became Michigan's first and only certified member of MD Anderson Cancer Network®, a program of MD Anderson Cancer Center. A world renowned-leader in cancer care and currently ranked No. 1 in the country for cancer care by *U.S. News and World Report*.

Created in 1941, MD Anderson is one of the most respected centers devoted exclusively to cancer patient care, research, education and prevention. It is located in central Houston in the Texas Medical Center. The institution is one of the nation's original three comprehensive cancer centers designated by the National Cancer Act of 1971 and is one of the 44 National Cancer Institutes designated comprehensive cancer centers to date. In fiscal year 2014, MD Anderson's 20,000-plus cancer fighters provided care to more than 127,000 patients, with the largest clinical trial program in the nation.

To become a member of the network, Covenant HealthCare and several cancer physicians, including, Hematologists/Oncologists, Radiation & Surgical Oncologists, underwent a stringent clinical and quality review evaluating how we are providing care to our cancer patients. The review was extensive and thorough and the Covenant Cancer Center was deemed worthy of the esteemed MD Anderson certified member affiliation designation.

Joining forces with the network, allows Covenant to further its mission of "Extraordinary Care" with access to MD Anderson's evidence-based guidelines, best practices and advanced treatment protocols. Patients can receive second opinions without leaving home and soon can benefit from Covenant's access to select MD Anderson clinical trials.

We marked another significant milestone in November, 2015 as the beautifully remodeled Covenant Radiation Center was unveiled featuring numerous technology upgrades including, the state of the art, Elekta Versa HD Linear Accelerator.

The Versa HD allows us to safely and efficiently deliver conventional radiation treatment to treat a broad spectrum of tumors throughout the body. It also allows treatment of highly complex cancers that require extreme targeting precision. The expanded capabilities of this technology present new opportunities to provide state-of-the-art cancer treatment to more patients in our community.

Versa HD leverages the latest technology to enable sophisticated approaches to traditionally challenging cases. The system's patented technology allow precise targeting of the tumor, allowing Covenant Radiation Center clinicians to administer higher doses that can enhance treatment effectiveness, while protecting critical structures such as the heart, spine, or bladder. The result is highly precise treatments with shorter treatment times, and the ability to offer highly advanced treatments while minimizing side effects and enhancing our patients' quality of life.

We continue to be recognized as an expert in care by the following national recognition and accreditation:

American College of Radiology (ACR)

Breast Imaging Center of Excellence

Commission on Cancer (CoC)

National Accreditation for Breast Health Programs (NAPBC)

STAR Certification- Cancer Recovery Rehabilitation

Woman's Choice Award America's Best Breast Care

Cancer is a scary diagnosis. With these new additions to an already strong cancer program, we can provide new hope and care to such a deserving community.

If you would like more information on our Cancer Center please call (989) 583-5234 or visit the website at www.covenanthealthcare.com/main/cancercare.aspx.

Sincerely yours,

Jackie Tinnin

Administrative Director

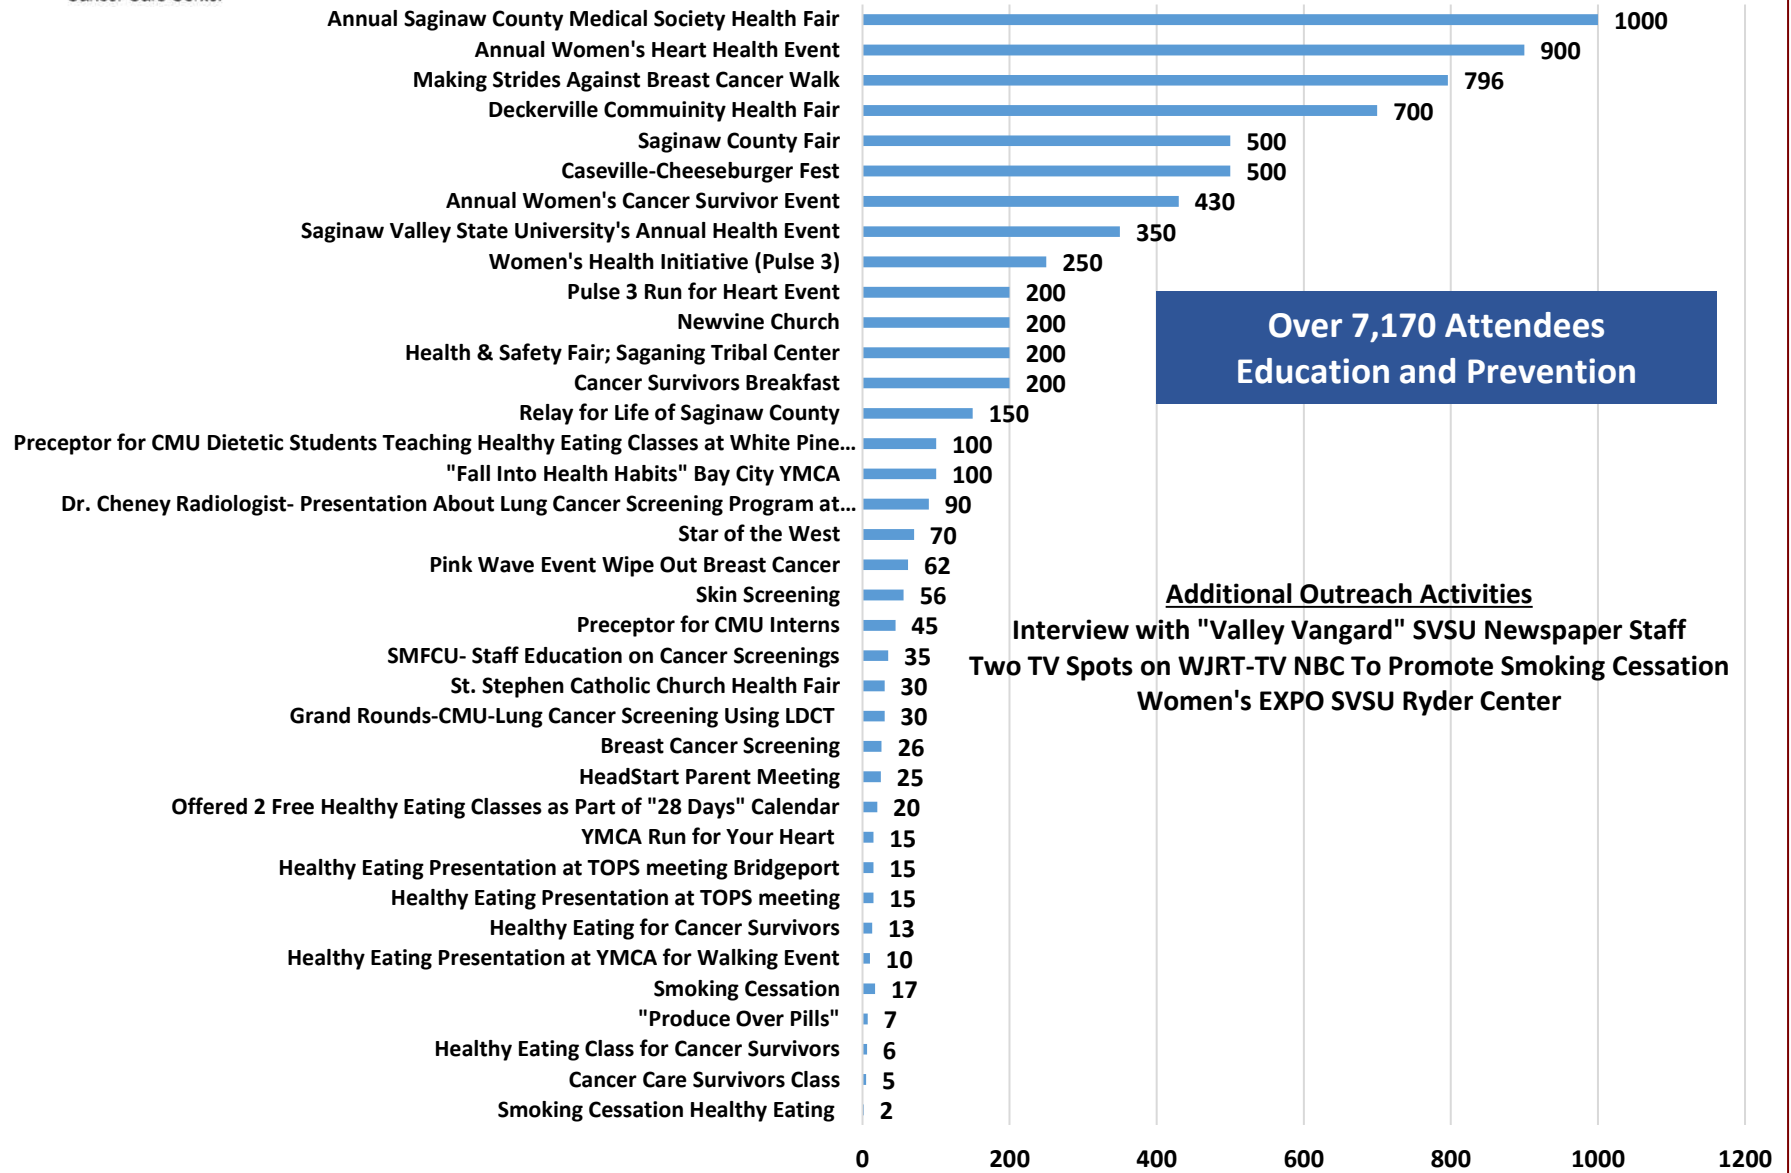

Covenant HealthCare Cancer Prevention Programs

The goal of the Covenant HealthCare Cancer Prevention Program is to reach the community through educational programs and is designed to reduce the incidence of specific cancer types. The goals of our program are consistent with the evidence-based national guidelines for cancer prevention.

Covenant HealthCare provides numerous prevention programs each year to aid the Saginaw region in education and prevention in regards to many types of cancer.

Covenant HealthCare Cancer Screenings

Detecting cancer at an early stage can improve survival and decrease morbidity. Screening tests can help diagnosis cancer at an early stage, oftentimes before symptoms appear. When diagnosed early it increases the propensity to treat or cure the disease reducing the growth and/or spread of cancer.

Covenant HealthCare offers two cancer screening programs each year. Each screening is based on community needs and adheres to recommendations that are consistent with evidence-based national guidelines and interventions. Processes are developed to follow-up on patients with positive findings

May 5, 2015 was the 14th annual Skin Screening event for the Saginaw area. The event is held each year at the Mackinaw Cancer Care Center.

In addition, Covenant HealthCare's 7th annual Breast Health Screening was October 10th 2015 at the Mackinaw Campus Breast Health Center.

The results are included in our 2015 Public Reporting of Outcomes Report.
